

SYMPOSIUM 2.0

V2.1 Changelog Addendum

Appended to SRS V2 / Master Prompt V2 / Project Documentation V2

Covers the V2.1 rebuild pass — multi-dimensional verification (functional, visual, content-completeness), not just "does it run"

Why V2.1 Exists

V2 was verified only for functional correctness — does the server boot, does the API return the right status code, does the database save correctly. That verification was real and caught real bugs. But it never checked whether every commitment made during planning was actually implemented, or whether the visual design was genuinely rebuilt rather than just re-colored. V2.1 is a full 32-phase rebuild pass that checks both dimensions, phase by phase, page by page.

Real Gaps Found and Fixed in V2.1

Area	Gap	Fix
About Page	Real SIET/CSE researched content was never actually written in, despite being promised	Added — founding year, VTU/AICTE affiliation, department history, sourced from the college's own site
Homepage	Testimonials, Judges teaser, Gallery preview, Sponsors preview, Quick Downloads sections were entirely missing; Registration CTA had stale copy referencing the old external-form model	All sections added and wired to live data; stale copy corrected
Committee Page	SRS requires a cross-reference to Members & Designations in the page body; only existed in the nav dropdown	Added a body-level link
Card/Grid Components	The "Concept B" redesign only changed CSS colour variables — card shadows, spacing, and structure were untouched from the prior design	Cards rebuilt: no default shadow, hairline border, accent reveal-on-hover, numbered-index variant; display font changed (Poppins → Space Grotesk) for genuine visual distinction
Events Page	FAQ section existed but had the wrong anchor ID — the nav link to it was silently broken; FAQ answers referenced the old external registration form	Anchor ID fixed, copy corrected
Schedule Page	SRS requires a downloadable PDF; none existed	Added
Gallery Page	SRS requires a category filter; none existed	Added, with working filter buttons
Travel & Stay / Code of Conduct	Database tables existed and were built in Phase 1 of V2, but no frontend code ever fetched or displayed them — pure placeholder text regardless of admin input	Wired to live data
Event Detail Page	Theme/Problem Statement reveal section was designed and given a database table in V2, but the actual page section was never built	Added, wired to the real table

Root Cause, Stated Plainly

Every gap above shares the same pattern: backend/database infrastructure was built and tested correctly, but the matching frontend piece was never finished, and functional testing (which only exercises what already exists) could never surface a missing piece. V2.1's verification process was deliberately changed to check content and design completeness against the full discussion record, not just whether existing code runs.

New Standing Quality Framework

Going forward, all future work is held to the standard defined in *Symposium Website Master Prompt v2.1* (team-provided) — architecture, frontend, UI, UX, branding, accessibility, SEO, security, performance, and code quality all reviewed to a 9.5+/10 target, with a 5-phase discipline (Understand → Audit → Plan → Implement → Verify) applied to every future change.
